

## BÖRGER BLUELINE NOVA AS COMPACT VERSION

*The BLUEline Nova can be used with different drives. Upon request, the drive is directly flanged to the pump. Due to the elimination of the coupling and the base frame, the unit is even more compact.*

SPACE-SAVING  
DESIGN

### VERSION

The compact version of the BLUEline Nova without a base frame is installed directly on the structure **(1)** provided by the customer. The flanged drive (gear motor, electric motor, hydraulic motor) transfers the torque via a parallel key to the rotary lobe pump, which is equipped with a hollow shaft. The gear casing cover is replaced by an adapter cover **(2)**.

### ADVANTAGES

- An additional coupling is not required
- Short design
- Simple integration into complex systems
- Low-on-space design
- Weight reduction by elimination of the base frame
